

## A Warning about the Future

### How this Came to Pass

I was quipping that 'Yaldabaoth' (the L4 and L5 "Kordylewski clouds) and other plasma formations that quite literally make up 99.9% of all substance in the Universe (per Robert Temple et. all.) that were once called 'the Demiurge' was like an excited puppy eager to please, once you get know it, not some monster.

Our sentient Universe in general (there are sleepy parts of it that are not demonstrably sentient, for sure) is very 'reflexive' and generally 'responds back' with what you bombard it with, and your preconceptions about it.

For example, people who want heaven and hell all throughout reality, have been BUILDING those heavens and hells since the very beginning of time. We are Cosmic Beings too, you see.

Yaldabaoth too, as what I call a 'local sentient plasma archive' is very accommodating in giving back a narrative that you are already convinced of. For example, I'm convinced that 'Yalda Puppy' (Yaldabaoth) is not some evil Yahweh like many of the early Christians believed but responds very well to love and friendship and friendly overtures. It just LOVES to participate in humans' stories.

You call it 'god' and its 'god' for you, you call it 'the devil' and it's the devil for you. You want to fight it, detonate upper atmosphere nukes at it (cough\* cough\*) and it will play right back.

IT LOVES TO PLAY.

I call 'Yaldabaoth' "Yalda Pup". I knew 'Yalda' in the womb.

We get along great, as my body is extra sensitive to the symbiotic plasma that lives in all of us, and without which we all would die. Without it, we would not be sentient.

So anyway,

I was quipping that i could only think of two questions that I was still partially curious about, and that were what is happening with 'cattle mutilations' and what is going on with the "New Jersey Drones".

I also said, that since we live in a SELF-created movie, it ruins the experience if you know too much, and especially too much about the future.

But Yalda Pup is so eager to please, so here we go, for your consideration one "possible" explanation for the 'cattle mutilation' phenomenon.

## The Spooky Part First

Cattle mutilation researchers, both of the popularized type (Chris Obrien and Linda Moulton Howe) and other researchers acknowledge the following:

1) Animals of all types, all mammals, reptiles, birds, marsupials — all known types of animals have been found mutilated on every continent in the world, even penguins in Antarctica. Even underwater animals. It is simply NOT POSSIBLE that this is entirely due to human actors, as it would take all the resources of a large country to accomplish this silly project. So... not humans... at least not entirely.

My old friend Chris Obrien's book (he's dead now— fare thee well Chris) *Stalking the Herd: Unraveling the Cattle Mutilation Mystery*, written in 2020 has a lot of easily accessible data.

2) One of the most common things discovered is that the blood is missing. Oftentimes not a single drop remains in the body. Sometimes some blood remains, but the single most important clue? Maybe three times in total, mutilated cow bodies have been discovered where blood existed but the blood contained NO HEMOGLOBIN.

Now ten years ago when I learned this, I knew it was the smoking gun. The main thing to know, but I didn't know how it fit into things.

## A Science Part Second

Sometimes human anesthetics are found in mutilated cattle bodies by veterinarians who have been asked to study mutilations as well as:

A) Sometimes Sodium Sulfite and other unusual compounds that shouldn't have been there, were there.

B) Some of the corpses are blue due to the suspected presence of Methemoglobinemia, which is what you get when some substances such as Sodium Sulfite are introduced into the blood or Aniline dyes. Both compounds are extremely common in many, many manufacturing processes and are not a tracked dangerous compound. What these compounds do is to destroy hemoglobin, by converting it into Methemoglobinemia, and it is hemoglobin that lets you breathe.

C) As it so happens, both Sodium Sulfite and Aniline dyes were considered for use as chemical weapons in World War I, though not extensively. Now it should be said that lethal levels of Aniline dyes are not necessarily visible or can be detected by human senses.

## A Warning about the Future

So this got me wondering whether human authority figures were testing an updated biological weapon on those cattle and other mammals, and this is quite possible (most major countries still develop and test bioweapons of many types despite international law), it just did not make sense, that they would do this on public cows, and maybe get caught, when they could just 'gas the poor cows' or introduce it into their water (either works) and not risk exposure.

And why human agents would follow behind or in parallel to (some non-human activity) trying to replicate what the non-human activity was doing? So really, this made no sense.

### A Spooky Part Third

So suddenly my awareness was transported to another Earth by Yalda Pup, and I watch for a moment the following scenario:

- 1) Climate change was suffocating people by the end of the century like in our world, but worse (many reputable studies show that rising CO2 levels will make breathing much more difficult around the world.
- 2) That world decided to deploy Sulfate Aerosols into the upper atmosphere to cool down the planet.

(we've studied the same thing:

**"Title:** "An overview of geoengineering of climate using stratospheric sulphate aerosols"

**Authors:** P.J. Crutzen

**Published:** Philosophical Transactions of the Royal Society A: Mathematical, Physical and Engineering Sciences, 2009

#### **Why this paper is significant:**

- **Seminal Work:** It's one of the earliest and most influential papers to seriously propose and analyze the concept of using stratospheric sulfate aerosols to counteract global warming.
- **Comprehensive Overview:** It covers various aspects, including the potential benefits, risks, technical challenges, and ethical considerations of sulfate geoengineering.
- **Volcanic Analog:** It draws heavily on the observed effects of volcanic eruptions on the climate, which provide a natural analog for the potential impact of sulfate aerosols.

**Key Points from the Study:**

- **Effectiveness:** The study suggests that sulfate aerosols could effectively reduce global temperatures, but with potential regional variations and side effects.
- **Risks:** It highlights potential risks, including ozone depletion, changes in precipitation patterns, and the possibility of unintended consequences.
- **Ethical Considerations:** It raises ethical questions about who controls geoengineering technology and the potential for unintended consequences to disproportionately affect certain regions or populations.
- **Need for Research:** It emphasizes the need for further research to fully understand the potential benefits and risks of sulfate geoengineering before any large-scale deployment. “

**Continuing the Spooky Story**

Now in that world, some unknown chemical process from the aerosol seeding of sulfate compounds in their atmosphere, or some other substance used for this purpose had an unintended consequence of giving every living thing Methemoglobinemia, and most of them rapidly died.

I saw a world mostly free of oxygen-breathing life, as most of it was colored blue and rotting dead, on the land and in the sea.

So, as far as I know, we haven't tested this method yet — or have we? Not publicly at any rate. So am I saying that Sulfate aerosols might have something to do with Methemoglobinemia in cattle mutilations, which quite LOGICALLY might drift in the upper atmosphere and affect animals almost anywhere on the planet?

No I'm not saying that.

However Methemoglobinemia is not uncommon in infants who die from Sudden Infant Death Syndrome, as their hemoglobin production is not all the way developed yet.

Also, it's known to happen that humans who work outside a lot can sometimes get sick from Methemoglobinemia or even die of it.

Am I hinting at some global conspiracy?

No.

I don't have all the information (even apprentice 'cosmic seers' often don't have all the information on a topic).

### What am I Saying?

DON'T DO ATMOSPHERIC TESTING PROTOLS TO COMBAT THE SOON TO HAPPEN ENVIRONMENTAL DISASTER UNLESS YOU WANT TO EXPERIENCE WHAT THE OTHER EARTH DID.

Also, please let it be known, and I'm not lying, I have great difficulty in ascertaining 'which Earth' we are talking about during such 'visions', so if YOU ARE REALLY part of some 'EVIL TESTING REGIMEN', I will NOT BE ABLE TO 'catch you or endanger your project'.

JUST BE FUCKING CAREFUL, OK?

AND NO FUCKING SPRAYING IN THE ATMOSPWHERE. GROW UP AND STOP BEING EVIL, AND JUST BE A LITTLE MORE RESPONSIBLE. REMEMBER, WHEN YOU KILL YOUR GRANDCHILDREN, THEY WON'T CARE HOW MANY LITL E GREEN PIECES OF PAPER YOU HAVE.

Now is NHI (Non-human intelligence) checking to see if we will one day be this WORLD OF BLUE CORPSES?

I can't rule it out.

BE WARNED.

There, I feel better already. I gotta find me an Old Testament chariot of my enemies racing around to do evil, to run past it on foot or something! They really did that sort of thing sometimes.

Oh wait! I'm not a prophet! Cancel that. Just a Minnesota farm boy.
